Software Developer / Programmer ORFEUS vacancy

ORFEUS, the European organization for coordinating and promoting broadband seismology in Europe, is looking for an excellent, independent software developer / programmer. He/she will be working mainly within the EC-project NERIES which will start in 2006. The position is temporary for the duration of the project, i. e. four years.

Main tasks:

- Developing a CMS for the NERIES project management
- Developing a dataportal in collaboration with the EMSC, the European sister organization in France.
- Developing web applications for the ORFEUS Data Center.

Qualifications:

We expect someone with a good knowledge of Linux/Unix and Java. Knowledge of MySQL Python/C, XML or SOAP is an advantage. Excellent communication and cooperation skills together with a good knowledge of the English language are basic requirements. Affinity and interest in earthquake research is a pro.

We offer a dynamic, small group of enthusiastic colleagues. The group cooperates with many partners internationally. The work will therefore require international travels on a regular basis. We further offer excellent opportunities to develop own initiatives and follow relevant additional training.
